

LITE-MINDER

Modular Inverter Series

*Minding your needs
along with it's own*

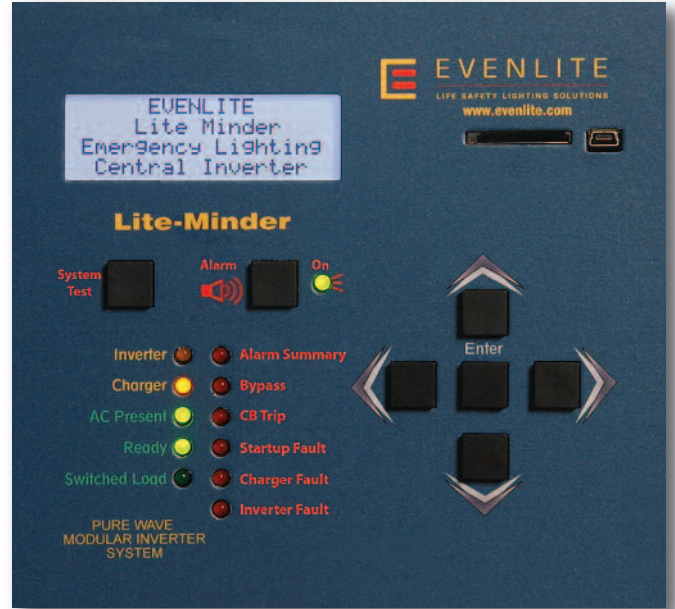

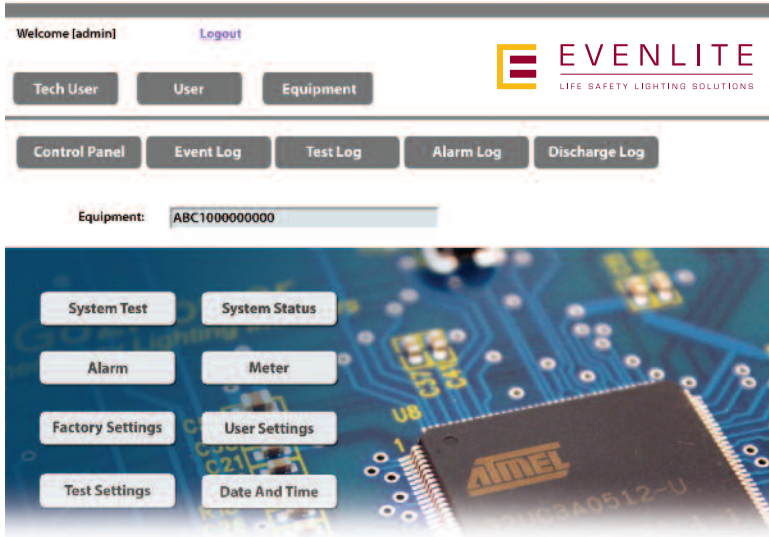

Stackable, Trackable and Totally Adaptable — Modular AC System

The LiteMinder Central Inverter System represents unsurpassed ingenuity in Fast Transfer, Pure Sine Wave Inverter technology. This Emergency Lighting solution has been developed to be compatible with today's complex energy saving systems and light sources, while minimizing maintenance requirements. The LiteMinder represents the pinnacle of engineering excellence with *features not found in traditional systems currently available.*

Pick and Choose for the Right Use — Modularity

The LiteMinder uses unique inverter modules that can be interconnected to build the required system capacity and any required redundancy. The modules can be field upgraded to increase system sizes and are available in increments of 1.1, 2.2, 2.8 & 3.3 KVA capacities. The LiteMinder can also be configured to provide Single Phase, Split Phase and Three Phase outputs, *eliminating the need for costly, inefficient external transformers.*

A Worldwide Wavelength — Remote Web Monitoring

The LiteMinder’s innovative web interface constantly monitors the system’s status and records all essential data. Users can log on, view, interact and download records as needed. The factory can also monitor and perform remote diagnostics which may eliminate expensive field service personnel.

Distinctly Developed Diagnostics

In addition to Self-Test, Self-Diagnostics, the LiteMinder also includes distinctive startup diagnostics to aid in the installation and maintenance, including: eight individual Startup Alarms (Communications, Set-Up Conflict, Low Battery, Back-Feed, Transfer/AC Fuse, Short/Overload, Miswire & Incorrect AC Input), together with eight individual Charger Alarms and eight individual Inverter Alarms.

“Buy America Compliant”

LiteMinder meets the requirements set by the ARRA to be “Buy American Compliant”. Please contact your representative for more information about “Buy American Compliant” products.

See the Sine — Intelligent Control Interaction

The LiteMinder features a key pad and convenient LCD display which provides an intuitive user interface and extensive status diagnostics. In compliance with UL 924, Self-Test, Self-Diagnostics is field configurable by zones and stores 1,000 Test, Event and Alarm logs, eliminating the need for costly manual test and data recording.

About Evenlite

Since 1993, Evenlite Inc. has designed, manufactured and marketed emergency lighting products for discerning customers worldwide. Beginning with our patented use of LED technology, Evenlite has consistently led the market with innovative products that deliver unparalleled performance and a sophisticated aesthetic.

Today, Evenlite continues to develop new ways to provide its customers with sustainable products that enhance the beauty of their projects.
